

HyperThin+

High-Plus Power. Contemporary Design.

The High-Plus lens that doesn't look High-Plus

The HyperThin+ Series delivers ultra-thin, ultra-light performance for high-plus prescriptions — available in both FT28 bifocal and Single Vision designs. Engineered with advanced freeform optics, these lenses provide superior clarity, reduced distortion, and dramatically improved cosmetics.

Why it Matters

See Better

- Freeform, hyper-aspheric design
- Crisp, stable optics across the lens
- Reduced peripheral distortion
- Lower image jump (FT28)
- Wide, comfortable viewing zones (SV)

Feel Better

- Noticeably **lighter**
- **Slimmer** profile
- Comfortable for **all-day wear**
- Smooth optics (FT28)

Look Better

- **Ultra-thin** construction minimizes "high-plus" appearance
- **More flattering** frame aesthetics
- Ideal for fashion frames
- Contemporary optics that remove the thick, heavy lenticular look.

Design Features

FT-28

- Ultra-thin construction
 - Example: +16.00D lens with only 8.5 mm CT
 - Example: +14.00D lens with only 8.35 mm CT
- Freeform optics for enhanced clarity and edge refinement
- Optimized FT28 segment (28 mm flat-top "D")
- Superior comfort vs. lenticular high-plus designs

Single Vision

- Ultra-thin, lightweight high-plus SV design
- Freeform aspheric optimization for edge-to-edge clarity
- Excellent for full-time wearers sensitive to lens weight
- Clearer peripheral optic zone

Ideal Patients

- High-plus (>8D) wearers seeking thinner, lighter lenses
- Unhappy with the round segment lenticular designs
- Long-time FT28 wearers needing a cosmetic upgrade
- Anyone sensitive to distortion or image jump

Recommend HyperThin+ lenses for your next high-plus wearer
