

Intelligent Optics

Where **Intelligent** **Optics** Begin

At Optik K&R, we design intelligent, reliable optical solutions that elevate modern vision care. Every lens we craft reflects our commitment to precision, consistency, and patient-first performance.

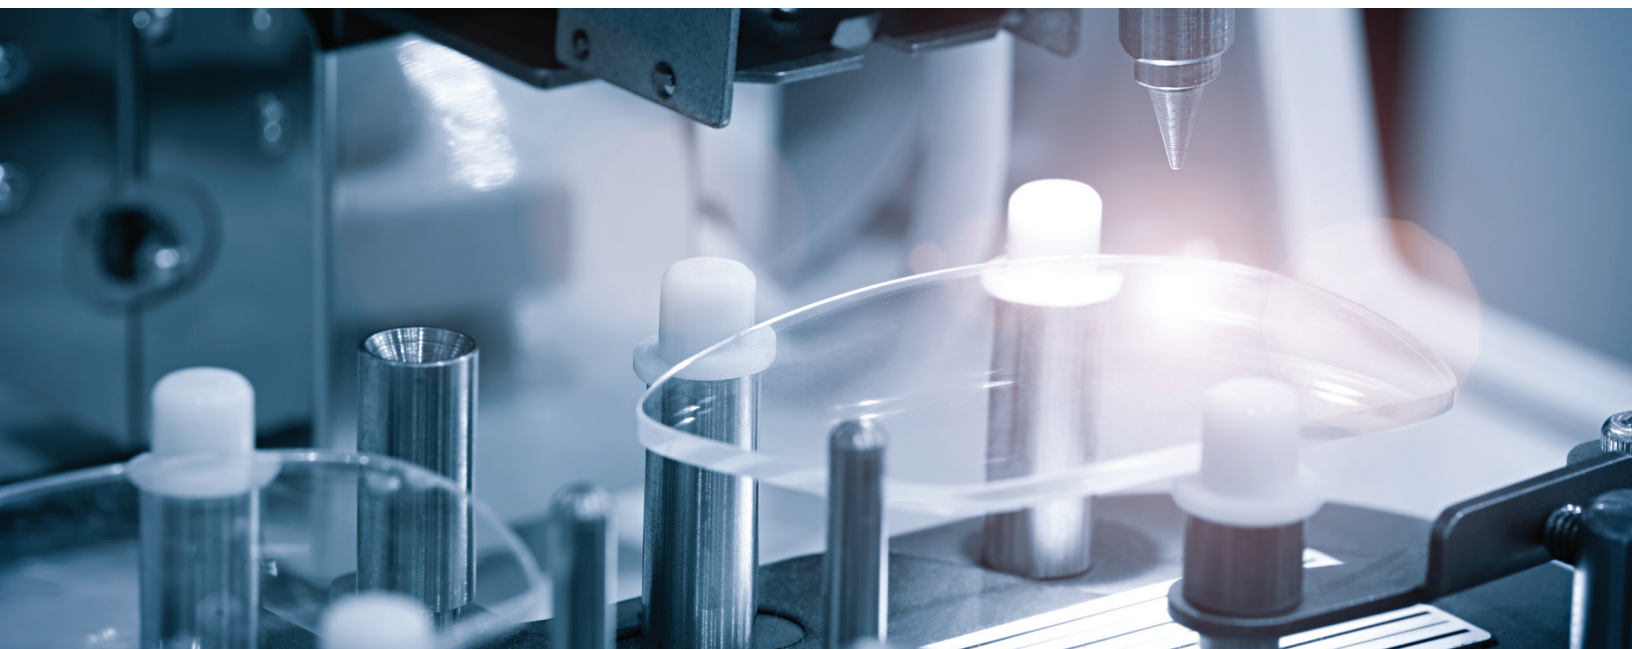

Founded in 1991, Optik K&R has become a trusted leader in optical manufacturing — developing and producing premium ophthalmic lenses, specialty contact lenses, and advanced coatings. Our expertise stems from decades of experience in high-precision optical engineering and process technology.

Unlike conventional lens providers, we combine deep technical knowledge with high-precision automation and integrated software to deliver fast, affordable, and customized solutions for eye care professionals.

Through continuous innovation and collaboration with industry partners, we refine every detail to ensure exceptional clarity, comfort, and reliability.

Why Partner with Us?

- Full-service optical lab
- State-of-the-art lens designs
- Consistent quality control as an ISO certified manufacturer
- Experienced ophthalmic professionals provide consultation for the most challenging cases
- Expertise in complex, high-precision jobs requiring advanced optical problem-solving
- Specialty lens solutions available, including advanced options like Hyperthin+
- Partnerships with multiple therapeutic-lens vendors to provide a full range of lens solutions
- Local Canadian support delivered by a knowledgeable, responsive customer service team
- Committed to fast, reliable turnaround times

Introducing the Jena® Family of Lenses

A modern optical portfolio built for clarity, comfort, and everyday performance.

The Jena® Family of Lenses represents Optik K&R's commitment to delivering dependable, high-quality vision solutions for clinics and patients who expect more from their eyewear. Engineered with precision and crafted for versatility, Jena® lenses provide consistent optical performance across a wide range of prescriptions and lifestyles.

Designed to support today's visual demands — from digital device use to active, on-the-go routines. Jena® lenses offer crisp optics, smooth visual transitions, and reliable comfort throughout the day. Their balanced design philosophy makes them an ideal choice for clinics seeking a trustworthy, easy-to-recommend lens family that fits seamlessly into their dispensing workflow.

Progressive	
	Jena® Optimized is designed to meet the high demanding visual needs of an active lifestyle at all vision distances. The ideal choice for first time progressive lens wearers.
	Jena® 8K delivers advanced German-engineered optics designed for the next level of visual quality. With even less distortion, it is the best option for precise clarity and supreme comfort.
	Loved by many, our popular Jena® 4K provides clearer and sharper vision for near, intermediate, and far distances. Fully customized to the patient's vision needs.
	Jena® W is designed with a wider reading area. Clearer near and reading vision for patients that primarily use progressive lenses for close up work.
	Jena® Premium is the original progressive design that provides clear vision at near, intermediate, and far distances at all times. Perfect for everyday use.
	Jena® Indoor is the perfect choice for clear and comfortable indoor vision. Available in three variations: Device , Workspace , and Studio . Each design has a different predetermined near, intermediate, and distance set for optimal clarity in various indoor settings.
Bifocal	
	Jena® B provides clear bifocal distance and reading vision, without a noticeable line or peripheral distortions. The invisible line allows for a more flattering lens, no image jump, and continuity of clear vision from near to distance.
Single Vision	
	Jena® HD is our standard single vision lenses that is perfect for everyday use. Our unique aspheric design focuses light to achieve crisp vision.
	Jena® i-Plus avoids eye-strain and fatigue associated with using devices for long periods. It provides a boost of plus power (magnification) to single vision wearers so the eye doesn't have to work as hard.

Lens Coating Technologies

LuxAR coatings are engineered to enhance lens performance through advanced surface protection, clarity optimization, and long-term durability. Designed to reduce reflections, resist everyday wear, and maintain optical precision, LuxAR delivers a cleaner, clearer visual experience for patients while supporting the high standards of modern practices. Each coating in the LuxAR family is built on intelligent surface-science principles, ensuring consistent quality and reliable performance across every lens.

Clear	
	LuxAR ES is our strongest AR coating with superior strength, hardness, and sturdiness.
	LuxAR U is our LuxAR with the additional layer of our Easy to Clean coating. Our oleophobic layer makes the surface slippery to repel water, fingerprints, and smudges.
	LuxAR Standard is our base signature anti-reflective coating with standard anti-smudge property. Ideal for those looking to reduce eye strain by eliminating ambient glare from street lights and car headlights.
Blue Light Protection	
	LuxAR BLUE transmits less of the potentially harmful blue light to reduce eye strain. It has a slight purple / blue AR colour with a yellow undertone. Compatible with Transitions®.
	Unlike the LuxAR BLUE, LuxAR CLEAR BLUE does not have any tint. Not compatible with Transitions®.

Warranty & Service Assurance

Jena® Lenses

All Jena® lenses are backed by a **100-day unconditional money-back guarantee**, supported by ISO-certified manufacturing and engineered for exceptional optical clarity and performance.

LuxAR Coatings

LuxAR ES, LuxAR U, LuxAR Blue, LuxAR Clear Blue	2 years	LuxAR Standard	1 year
